

## PROJECT 01 | E-COMMERCE APP

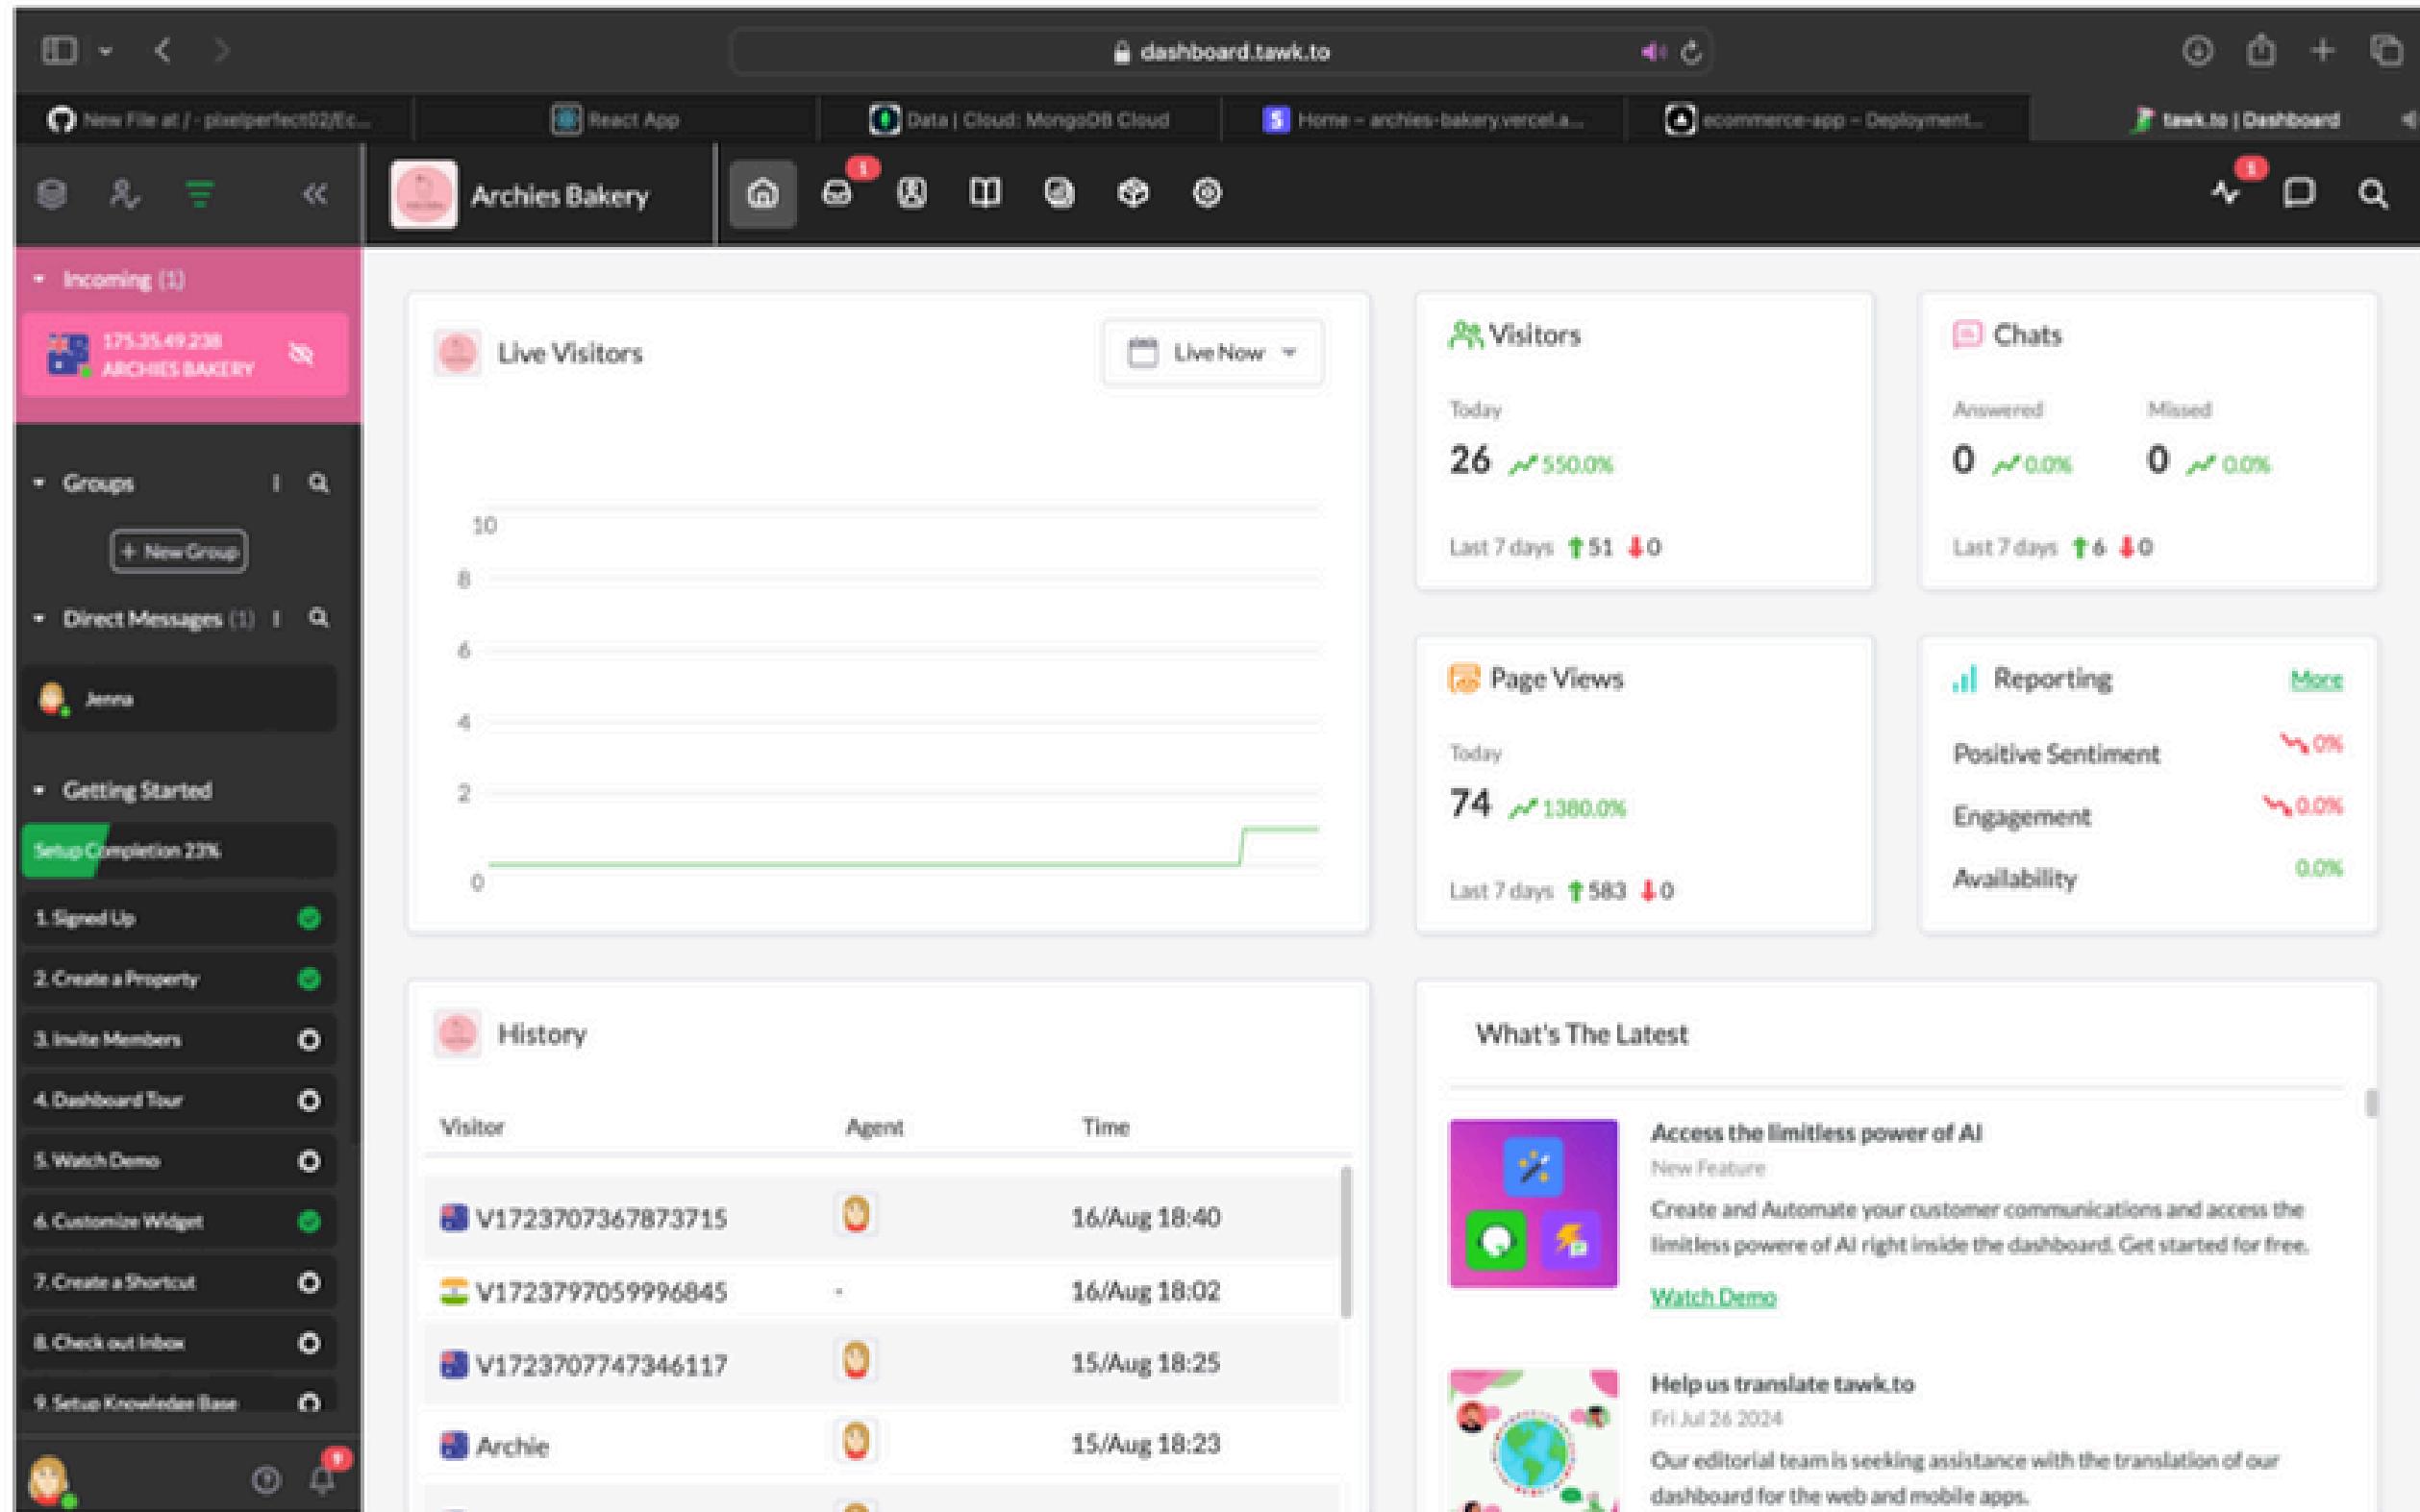

### Description:

An e-commerce app in React and Node.js using Stripe for payments, MongoDB Atlas for database and Tawk for Chatbot.

### Technologies & Tools:

Programming Languages: JavaScript, HTML, CSS, Frameworks & Libraries: React.js, Node.js, Databases: MongoDB, Tools: GitHub, VS Code, Tawk, Stripe

Link: <https://twinkleandtinsel.vercel.app>

The TAWK App backend tracks key analytics for Archie's Bakery eCommerce business, including website visits, customer messages, and customer statistics.

The screenshot shows the MongoDB Atlas Data Services interface. On the left, a sidebar menu includes Project 0, Deployment (selected), Database (selected), Services (Device & Edge Sync, Triggers, Data API, Data Federation, Atlas Search, Stream Processing, Migration), and Security (Quickstart, Backup, Database Access, Network Access, Advanced). The main area displays the 'test.orders' collection. It shows storage size (24KB), logical data size (807B), total documents (1), and index total size (24KB). There are tabs for Find, Indexes, Schema Anti-Patterns, Aggregation, and Search Indexes. A search bar for namespaces is present. Below the collection name, there is a link to generate queries from natural language in Compose. A query results section shows 1 document found, with a JSON snippet:

```
_id: ObjectId('66c164f3998e0a096d3adb81')
email : "archieverma114@gmail.com"
pickupDate : 2024-08-18T03:04:39.000+00:00
pickupTime : 2024-08-18T03:04:39.000+00:00
totalAmount : 8
cartItems : Array (2)
  * 0: Object
    id : "1"
    name : "Vanilla Delight"
    description : "A delightful vanilla cupcake topped with buttercream."
    price : 3.5
    image : "/static/media/logo.28dc8a7ec37b734e82ab.png"
  * 1: Object
    id : "3"
    name : "Strawberry Dream"
    description : "A soft strawberry cupcake with a fresh strawberry on top."
    price : 4.5
    image : "/static/media/logo.28dc8a7ec37b734e82ab.png"
formattedItems : "Item: Vanilla Delight"
```

The MongoDB backend which stores customer orders and related statistics for Archie's Bakery website, securely managed through MongoDB Atlas.

Oceanic Sparkle

Today, I meet ex-soldiers turning themselves into entrepreneurs. They earn that much because they have skills in their field as well as other skills they can teach and market. I know of no other skills to be more interesting and marketable than skills of selling and marketing. Most people, primarily due to their fear of rejection, are at a complete loss, negotiating, handling rejection, the early life is. Just imagine if that newspaper could become a best-seller! It's a wise marketing technique to sell products to your friends as well as family members. It helps them earn money, and it also helps them learn how to sell. Even if they're not interested in selling, they can still help their friends by giving them tips on how to sell. This will help them improve their selling skills.

The image shows a screenshot of a website for "Twinkle & Tinsel". At the top, there's a header with a search bar containing "Search...", a magnifying glass icon, and an 'X' button. Below the header, there are navigation links for "Home", "About", "Shop", "Contact", and a shopping cart icon. The main content area features a section titled "Contact Us" with three input fields: "Name:", "Email:", and "Message:". Below these fields is a "Send Message" button. To the right, there's a live chat window titled "Twinkle & Tinsel" with a message from the bot: "Hi! Welcome to Twinkle & Tinsel. How can we help?". The chat includes a text input field with placeholder text "Type here and press enter..", a like button, a link icon, and a smiley face icon. A watermark at the bottom right of the chat area says "Powered by tawk.to".

## SYSTEM ARCHITECTURE

**THE UNIVERSITY of ADELAIDE**

## SECURITY QUESTION EVALUATOR

### Introduction

Security question is one of the common techniques implemented by many organisations to assist users in a self-help password recovery process. The concept of security question builds on the assumption that the questions are personal and only the user is likely to know the answer. In practice, however, the answers to the questions may be easily sought online or deducted.

As an example, during the 2008 United States presidential election campaign, Vice President candidate Sarah Palin's personal email account was hacked. The hacker, David Kermani, successfully recovered her account password by answering her security question using publicly available information.

### Design and Solution

5 Criteria      2 Modules

Our Web Application's design and solution is a simple one, in which our team follows a set of 5 criterias as shown above, which we grouped them to specific evaluation methods, in our evaluation module. Furthermore, our application is built upon 3 core modules to handle different functions, some more complicated than the others.

- Data Gathering Module**
  - Extracts openly-available online data about a specific person
  - Allows users to select from a list of questions that meet multiplicity and consistency standards
  - Allows users to enter the answer for a previously selected question, restrictions to accepted answers will be taken to fulfill usability and memorability standards
- Evaluation Module**
  - Conducts checks on gathered data, selected question and answers to find any matches. This module aims to fulfill confidentiality standards

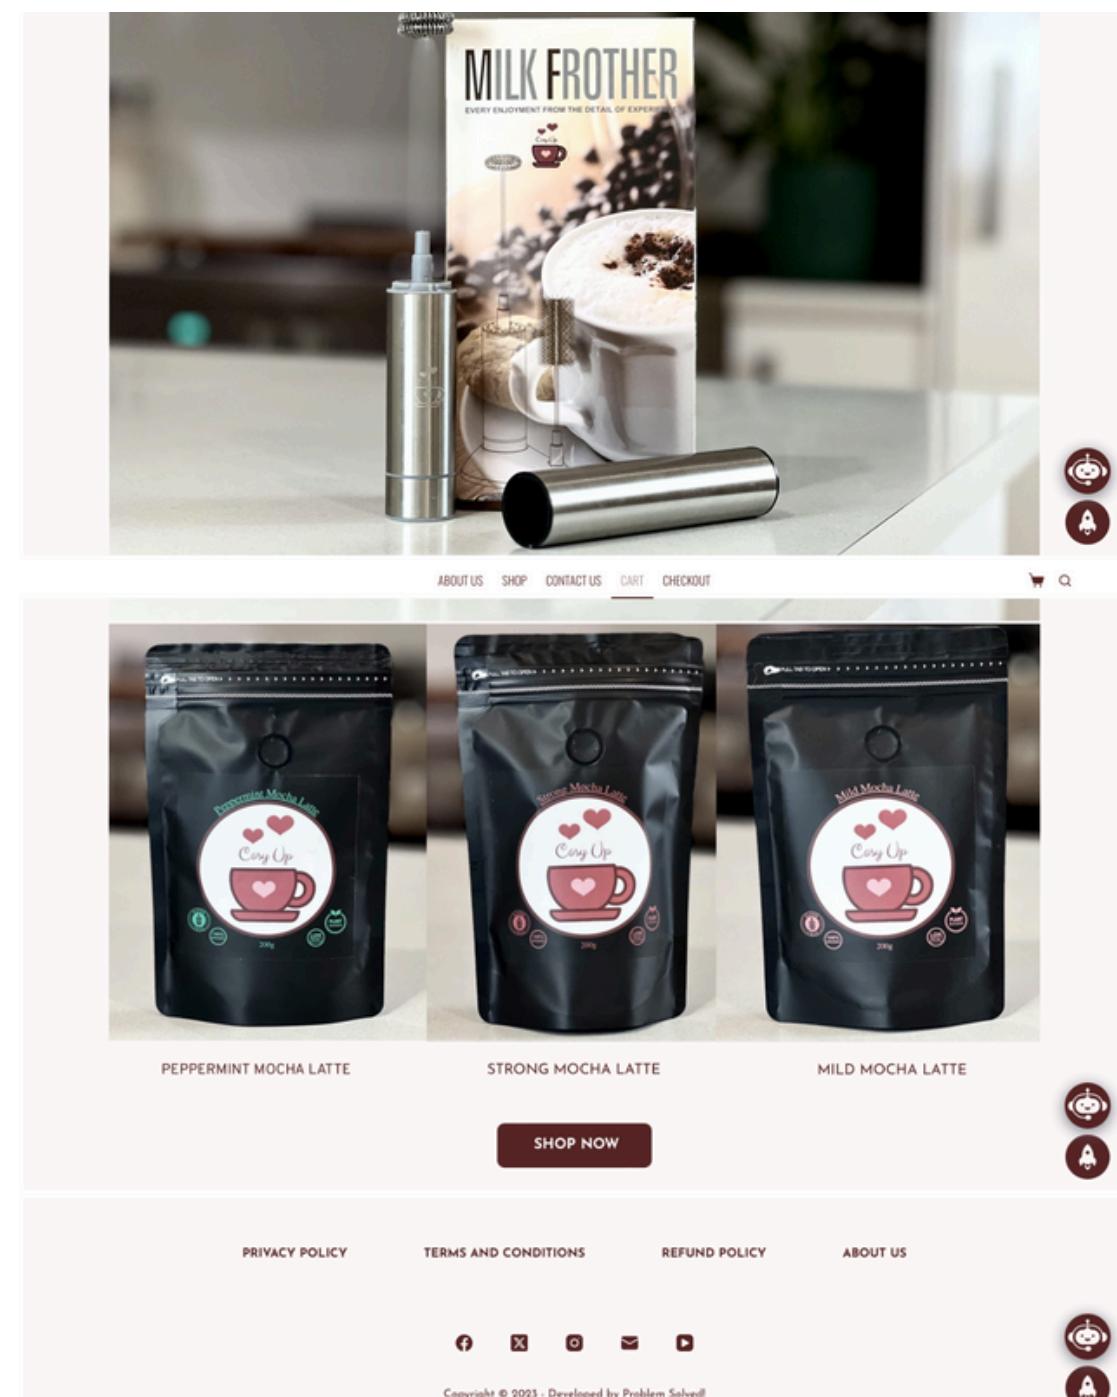

### Evaluation Process

- The application utilises Knutt-Morris-Pratt algorithm and Levenshtein distance as a method to compare, scan and analyse data.
- The flowchart below illustrates the steps for our evaluation:

**Future Work**

- Future enhancements to the application model may provide several social media alternatives for the user after reviewing the privacy and scraping permissions of social media apps.
- Enhancing context analysis to provide users more accurate results if their information is online.
- Setting up the app for more than simply security questions, including more advanced password recovery tools.

*Evaluation results and percentage match analysis conducted for SA Health clients as part of my Honours Project. The system architecture and project poster are available for reference.*

## PROJECT 05 | COSY UP

### Description:

An e-commerce venture, created this WordPress website hosted on SiteGround, with a GoDaddy domain.

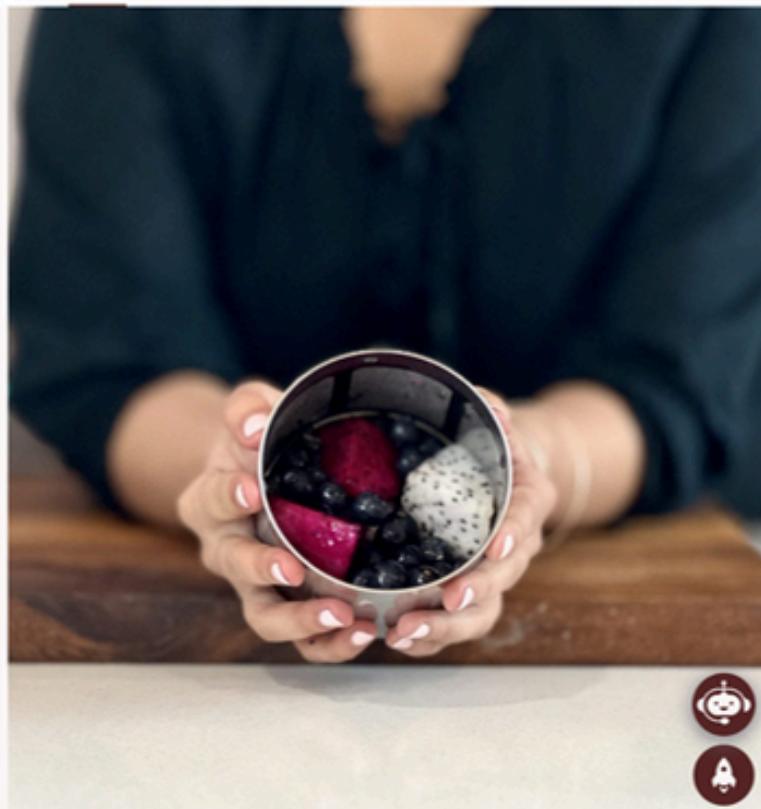

### Technologies & Tools:

Tools: SiteGround, WordPress, GoDaddy

# Mesmerising Features of the Cosy Up Multi-Maker

- Versatility at its best:** From luscious plant-based milks to rich soups, invigorating juices, and silky smoothies, the Multi-Maker is your comprehensive culinary partner.
- DIY Delight:** Revel in the pleasure of DIY, crafting your own nut milks, grain beverages, and beyond. Bid adieu to additives and welcome fresh, organic goodness.
- Mess-Free Magic:** Say goodbye to the tedious process of squeezing nuts and grains. With our innovative filter basket, making your favourite plant-based milk is a clean and hassle-free affair.
- Safety First:** With features like Boiled Dry Protection, Spill Protection, and Motor Overheating Protection, we prioritise your safety, ensuring a seamless operation every time.
- Power-Packed Performance:** Boasting a heating prowess of 800W and a motor capacity of 120W, the Multi-Maker ensures swift and proficient outcomes.

## Why the Cosy Up Multi-Maker is an Essential:

- Time & Money Saver:** Eliminate the need for multiple gadgets; the Multi-Maker is your all-in-one solution, conserving your time, finances, and kitchen space.
- Eco-conscious:** Diminish your environmental impact by crafting fresh plant-based concoctions at home, minimising waste and excess packaging.
- Nutrition Amplified:** Take charge of your intake. Opt for the freshest components and sidestep unnecessary additives, championing a healthier lifestyle.
- Declutter Your Kitchen:** At Cosy Up, we believe it's impractical to clutter your kitchen with gadgets that serve only one purpose. Simplify your culinary space with our Multi-Maker.
- Zero Waste, Maximum Taste:** Not only does our Multi-Maker ensure zero waste, but the leftover pulp from your plant-based milk ingredients can be transformed into cookies and other scrumptious delights.

## PROJECT 07 | EMOJI LOVER MOBILE APP

### Description:

*This is a straightforward mobile app developed using Xcode and Swift, enabling users to effortlessly switch between various emojis.*

### Technologies & Tools:

*Programming Languages: Swift  
Tools: Xcode, GitHub*

The screenshot shows a Jupyter Notebook interface with a sidebar on the left containing a file tree and a search bar. The main area displays a notebook titled "workflow.ipynb". The notebook contains several code cells and their outputs:

- Cell [19]: 

```
display(HTML('<h1><center>Some Basic Visualisation of Jupyter Lab Workflow using Voila Dashboard</center></h1>'))
```

 Output: Some Basic Visualisation of Jupyter Lab Workflow using Voila Dashboard
- Cell [4]: 

```
display(HTML('<p><h3><center>This a a simple Dashboard made with Jupyter notebook & Voila</center></h3></p>'))
```

 Output: This a a simple Dashboard made with Jupyter notebook & Voila
- Cell [5]: 

```
display(HTML('<p><h4>The Dataset</h4></p>'))
```

 Output: The Dataset
- Cell [10]:

```
data = [
    {'Name': 'John', 'Age': 30, 'City': 'New York'},
    {'Name': 'Alice', 'Age': 25, 'City': 'Los Angeles'},
    {'Name': 'Bob', 'Age': 35, 'City': 'Chicago'}
]

new_entry = {'Name': 'Eve', 'Age': 28, 'City': 'San Francisco'}
data.append(new_entry)

def display_data():
    for row in data:
        print(f"Name: {row['Name']}, Age: {row['Age']}, City: {row['City']}")
```

 Output:

```
Name: John, Age: 30, City: New York
Name: Alice, Age: 25, City: Los Angeles
Name: Bob, Age: 35, City: Chicago
Name: Eve, Age: 28, City: San Francisco
```
- Cell [22]:

```
import matplotlib.pyplot as pyplot
names = [row['Name'] for row in data]
ages = [row['Age'] for row in data]
pyplot.figure(figsize=(8, 5)) # Optional: Set the figure size
pyplot.bar(names, ages)
pyplot.xlabel('Name')
pyplot.ylabel('Age')
pyplot.title('Age Distribution')
```

The status bar at the bottom indicates "Mode: Edit" and "Ln 6, Col 18 workflow.ipynb 1".

## PROJECT 08 | JUPYTER WORKFLOW

### Description:

An illustrative project showcasing the utilization of Jupyter Notebook and voila was used to turn the Jupyter notebook into a standalone web application.

### Technologies & Tools:

Tools: Jupyter Notebook, Voila, GitHub

```
